Temporary Peelable Protection for window and glass

Skudo WINDOW UV ADVANCE is the result of intense development to deal with the extreme conditions imposed on today's construction elements. Skudo Window UV Advance is the perfect solution for all residential and commercial projects that require temporary window and glass protection from start to finish. Skudo Window UV Advance is has superior film strength sufficient to withstand cement and paint splatter whilst maintaining its protection of the valuable glass and frames for up to 12 months or 160,000 Langley's (UV Radiation). It is also suitable for Low-E glass.

Skudo WINDOW UV Advance has been developed to be applied to:

- Glass, and Low-E glass (low emissivity)
- Metals such as stainless steel and aluminium
- PVCu, tiles and some cladding

SUITABLE FOR UP TO 12 MONTHS

Skudo Window UV Advance is easily applied by brush or roller and just as easy to remove by simply peeling off leaving no residue on the surface. Skudo Window UV Advance can be applied up to 5 sqm per litre and with only one coat. For best results, two coats can be applied. Drying time will vary according to the relative humidity and ambient temperature but approximately 2-4 hours would be classified as normal.

Skudo Window UV Advance will store up to 12 months if kept in a cool, dry, shaded environment. Please note Skudo Window UV Advance will not withstand freezing in a liquid state so ensure temperature storage is maintained above 4 degrees C. Once applied, brushes and rollers are easily washed out in water. Skudo Window UV Advance can also be easily discarded in local refuse facilities once it has been peeled.

Skudo Window UV Advance is not suitable to be applied on acrylic. If in doubt please speak to Skudo technical representatives prior to application. Please refer to application instructions within the product label for more information.
